County Update

The Quarterly Newsletter For The Belmont County Engineer's Office

Terry's Desk

July was a hectic month for us as several projects continued and others got started. We took delivery of our speed and curve ball bank studies utilizing a 90% safety grant from the Federal Highways Administration. Work on the Rover pipeline continued across the county, and well pad activity kept ticking up. County crews repaired slips on CR 32 Kilgore Road and on CR 10 Blaine Barton Road. Our bridge crew put a new deck on the CR 64 Unity Church bridge, and Gulfport Energy replaced bridges on CR 2 Deep Run Road and CR 16 Nixon Run Road.

In August the cool and wet summer made it difficult to apply road oil. Our \$501,625.00 OPWC project began with an Ohio West Virginia Excavating retaining wall project on CR 2 Deep Run Road. Our road crews repaired a slips on CR 214 and on CR 44 Winding Hill Road. We continued ditching and pothole patching as the weather permitted. Towards the last of August, we spent a lot of time assisting townships with plans and estimates, and filling out applications for OPWC & safety grant funding.

In September we got some drier weather and were finally able to finish the road oil projects. Ascent Resources replaced a bridge on CR 4 Barton Road, and our bridge crew rehabbed and repaired the trusses on CR 92 Newcastle Road and on Pease Twp. 652. We also replaced a small bridge in Glencoe, on Richland Twp. 1107.

Stay safe and enjoy the fall scenery.

Road and Bridge Projects

County Road 92, New Castle Road. This bridge had a new deck, stringers and floor beams installed. It was part of a \$338,730 OPWC project.

County Road 2, Deep Run. This 12 foot elliptical culvert replacement was done by Gulfport Energy.

Welcome Andy Hadzima

Andy Hadzima started with the Engineer's Office on September 11th in a Drafting Tech II position. He graduated from Belmont College with an Associates in Civil Engineering.

He enjoys camping, fishing, sports and dirt bike riding.

Piling wall project on County Road 2, Deep Run funded by OPWC and constructed by Ohio West Virginia Excavating.
