2019 began quietly, and we had high hopes for a more normal year, at least in terms of precipitation. Our bridge crew started the New Year by replacing part of the wood deck on Goshen Twp. 191. Our road crews were kept busy by downed trees and pothole patching. We made temporary repairs to a six-foot diameter metal culvert that threatened to close Pease Twp. 630, as well as swallow up the driveway of a nearby house. This culvert was damaged in 2018's Federal disaster, and we hope to see the permanent repair in 2019. We also completed a speed study project that reduced posted speeds in sixteen locations on various County roads. To help speed up the disaster recovery work, we selected design consultants to assist the townships (and the County) with our FEMA projects. Our crews made repairs on culverts on CR 82 Airport Road and CR 86 Pugh Ridge. In late January, we received a \$4 million loan I had requested to help with our disaster projects. The loan will be repaid over the next few years using the license plate fees enacted by our Commissioners in May of 2018. Without those plate fees and this loan, the disaster repairs would have been delayed for several years.

In February we kicked off our annual bridge inspection program, inspecting 276 County and township bridges. The second week of February saw a hard freeze turn into a rapid thaw, followed by heavy rain. This was the same scenario that caused the disaster in 2018, and unfortunately the same pattern caused significant new damage this year. Along with berm washouts and culverts plugged with debris, we had almost 30 new road slips develop. This was another setback we just didn't need, as we are still struggling to get Federal funding approved to repair last year's damage. The good news was, the damage this year wasn't as severe as a year ago. And just like last year, our crews were able to quickly clear the debris and keep the roads open. We were hit again in late February, this time by high winds. But our road and bridge crews combined their efforts for another week and got the trees cleaned up.

Terry’s Desk.....continued from Page 1

March came in like a lion... and unfortunately went out like one! Our bridge crew made repairs to a retaining wall on CR 2 Deep Run. We completed the design on the CR 84 Oak View Culvert Replacement project, and we will be advertising it for bids in the next few weeks. On March 20, the Governor declared a new emergency for 37 of Ohio’s Counties, including Belmont. We’re hoping the President will declare it a Federal disaster, thus mobilizing FEMA. We’ve had almost \$5 million in new damages just on Belmont County roads this year, so we need all the help we can get. ODOT and the townships have had more damages this year as well. Despite the weather, our road crews have been busy adding stone to gravel roads, ditching, and making culvert repairs, like on CR 30 Dixon Hill Road. And they’ve been working on preparing the roads for this year’s chip seal project. Our bridge crew finished the month by completing a retaining wall underpinning project on CR 16 Nixon Run Road.

Wall collapse on County Road 2 Deep Run.

Temporary 6 foot culvert repair at the intersection of County Road 16 Nixon Run and Pease Township Hart Road.

Along with berm washouts and culverts plugged with debris, we had almost 30 new road slips develop. This was another setback we just didn't need, as we are still struggling to get Federal funding approved to repair last year's damage. The good news was, the damage this year wasn't as severe as a year ago. And just like last year, our crews were able to quickly clear the debris and keep the roads open. We were hit again in late February, this time by high winds. But our road and bridge crews combined their efforts for another week and got the trees cleaned up.

March came in like a lion... and unfortunately went out like one! Our bridge crew made repairs to a retaining wall on CR 2 Deep Run. We completed the design on the CR 84 Oak View Culvert Replacement project, and we will be advertising it for bids in the next few weeks. On March 20, the Governor declared a new emergency for 37 of Ohio’s Counties, including Belmont. We’re hoping the President will declare it a Federal disaster, thus mobilizing FEMA. We’ve had almost \$5 million in new damages just on Belmont County roads this year, so we need all the help we can get. ODOT and the townships have had more damages this year as well. Despite the weather, our road crews have been busy adding stone to gravel roads, ditching, and making culvert repairs, like on CR 30 Dixon Hill Road. And they’ve been working on preparing the roads for this year’s chip seal project. Our bridge crew finished the month by completing a retaining wall underpinning project on CR 16 Nixon Run Road.

2019 began quietly, and we had high hopes for a more normal year, at least in terms of precipitation. Our bridge crew started the New Year by replacing part of the wood deck on Goshen Twp. 191. Our road crews were kept busy by downed trees and pothole patching. We made temporary repairs to a six-foot diameter metal culvert that threatened to close Pease Twp. 630, as well as swallow up the driveway of a nearby house. This culvert was damaged in 2018's Federal disaster, and we hope to see the permanent repair in 2019. We also completed a speed study project that reduced posted speeds in sixteen locations on various County roads. To help speed up the disaster recovery work, we selected design consultants to assist the townships (and the County) with our FEMA projects. Our crews made repairs on culverts on CR 82 Airport Road and CR 86 Pugh Ridge. In late January, we received a \$4 million loan I had requested to help with our disaster projects. The loan will be repaid over the next few years using the license plate fees enacted by our Commissioners in May of 2018. Without those plate fees and this loan, the disaster repairs would have been delayed for several years.

In February we kicked off our annual bridge inspection program, inspecting 276 County and township bridges. The second week of February saw a hard freeze turn into a rapid thaw, followed by heavy rain. This was the same scenario that caused the disaster in 2018, and unfortunately the same pattern caused significant new damage this year. Along with berm washouts and culverts plugged with debris, we had almost 30 new road slips develop. This was another setback we just didn't need, as we are still struggling to get Federal funding approved to repair last year's damage. The good news was, the damage this year wasn't as severe as a year ago. And just like last year, our crews were able to quickly clear the debris and keep the roads open. 2019 began quietly, and we had high hopes for a more normal year, at least in terms of precipitation. Our bridge crew started the New Year by replacing part of the wood deck on Goshen Twp. 191. Our road crews were kept busy by downed trees and pothole patching. We made temporary repairs to a six-foot diameter metal culvert that threatened to close Pease Twp. 630, as well as swallow up the driveway of a nearby house. This culvert was damaged in 2018's Federal disaster, and we hope to see the permanent repair in 2019. We also completed a speed study project that reduced posted speeds in sixteen locations on various County roads. To help speed up the disaster recovery work, we selected design consultants to assist the townships (and the County) with our FEMA projects. Our crews made repairs on culverts on CR 82 Airport Road and CR 86 Pugh Ridge. In late January, we received a \$4 million loan I had requested to help with our disaster projects. The loan will be repaid over the next few years using the license plate fees enacted by our Commissioners in May of 2018. Without those plate fees and this loan, the disaster repairs would have been delayed for several years.

In February we kicked off our annual bridge inspection program, inspecting 276 County and township bridges. The second week of February saw a hard freeze turn into a rapid thaw, followed by heavy rain. This was the same scenario that caused the disaster in 2018, and unfortunately the same pattern caused significant new damage this year. Along with berm washouts and culverts plugged with debris, we had almost 30 new road slips develop. This was another setback we just didn't need, as we are still struggling to get Federal funding approved to repair last year's damage. The good news was, the damage this year wasn't as severe as a year ago. And just like last year, our crews were able to quickly clear the debris and keep the roads open. We were hit again in late February, this time by high winds. But our road and bridge crews combined their efforts for another week and got the trees cleaned up.

March came in like a lion... and unfortunately went out like one! Our bridge crew made repairs to a retaining wall on CR 2 Deep Run. We completed the design on the CR 84 Oak View Culvert Replacement project, and we will be advertising it for bids in the next few weeks. On March 20, the Governor declared a new emergency for 37 of Ohio’s Counties, including Belmont. We’re hoping the President will declare it a Federal disaster, thus mobilizing FEMA. We’ve had almost \$5 million in new damages just on Belmont County roads this year, so we need all the help we can get. ODOT and the townships have had more damages this year as well. Despite the weather, our road crews have been busy adding stone to gravel roads, ditching, and making culvert repairs, like on CR 30 Dixon Hill Road. And they’ve been working on preparing the roads for this year’s chip seal project. Our bridge crew finished the month by completing a retaining wall underpinning project on CR 16 Nixon Run Road.

Wall collapse on County Road 2 Deep Run.

2019 began quietly, and we had high hopes for a more normal year, at least in terms of precipitation. Our bridge crew started the New Year by replacing part of the wood deck on Goshen Twp. 191. Our road crews were kept busy by downed trees and pothole patching. We made temporary repairs to a six-foot diameter metal culvert that threatened to close Pease Twp. 630, as well as swallow up the driveway of a nearby house. This culvert was damaged in 2018's Federal disaster, and we hope to see the permanent repair in 2019. We also completed a speed study project that reduced posted speeds in sixteen locations on various County roads. To help speed up the disaster recovery work, we selected design consultants to assist the townships (and the County) with our FEMA projects. Our crews made repairs on culverts on CR 82 Airport Road and CR 86 Pugh Ridge. In late January, we received a \$4 million loan I had requested to help with our disaster projects. The loan will be repaid over the next few years using the license plate fees enacted by our Commissioners in May of 2018. Without those plate fees and this loan, the disaster repairs would have been delayed for several years.

In February we kicked off our annual bridge inspection program, inspecting 276 County and township bridges. The second week of February saw a hard freeze turn into a rapid thaw, followed by heavy rain. This was the same scenario that caused the disaster in 2018, and unfortunately the same pattern caused significant new damage this year. Along with berm washouts and culverts plugged with debris, we had almost 30 new road slips develop. This was another setback we just didn't need, as we are still struggling to get Federal funding approved to repair last year's damage. The good news was, the damage this year wasn't as severe as a year ago. And just like last year, our crews were able to quickly clear the debris and keep the roads open. We were hit again in late February, this time by high winds. But our road and bridge crews combined their efforts for another week and got the trees cleaned up.

Terry’s Desk.....continued from Page 1

March came in like a lion... and unfortunately went out like one! Our bridge crew made repairs to a retaining wall on CR 2 Deep Run. We completed the design on the CR 84 Oak View Culvert Replacement project, and we will be advertising it for bids in the next few weeks. On March 20, the Governor declared a new emergency for 37 of Ohio’s Counties, including Belmont. We’re hoping the President will declare it a Federal disaster, thus mobilizing FEMA. We’ve had almost \$5 million in new damages just on Belmont County roads this year, so we need all the help we can get. ODOT and the townships have had more damages this year as well. Despite the weather, our road crews have been busy adding stone to gravel roads, ditching, and making culvert repairs, like on CR 30 Dixon Hill Road. And they’ve been working on preparing the roads for this year’s chip seal project. Our bridge crew finished the month by completing a retaining wall underpinning project on CR 16 Nixon Run Road.

Wall collapse on County Road 2 Deep Run.

Temporary 6 foot culvert repair at the intersection of County Road 16 Nixon Run and Pease Township Hart Road.

The good news was, the damage this year wasn't as severe as a year ago. And just like last year, our crews were able to quickly clear the debris and keep the roads open. We were hit again in late February, this time by high winds. But our road and bridge crews combined their efforts for another week and got the trees cleaned up.

March came in like a lion... and unfortunately went out like one! Our bridge crew made repairs to a retaining wall on CR 2 Deep Run. We completed the design on the CR 84 Oak View Culvert Replacement project, and we will be advertising it for bids in the next few weeks. On March 20, the Governor declared a new emergency for 37 of Ohio’s Counties, including Belmont. We’re hoping the President will declare it a Federal disaster, thus mobilizing FEMA. We’ve had almost \$5 million in new damages just on Belmont County roads this year, so we need all the help we can get. ODOT and the townships have had more damages this year as well. Despite the weather, our road crews have been busy adding stone to gravel roads, ditching, and making culvert repairs, like on CR 30 Dixon Hill Road. And they’ve been working on preparing the roads for this year’s chip seal project. Our bridge crew finished the month by completing a retaining wall underpinning project on CR 16 Nixon Run Road.

2019 began quietly, and we had high hopes for a more normal year, at least in terms of precipitation. Our bridge crew started the New Year by replacing part of the wood deck on Goshen Twp. 191. Our road crews were kept busy by downed trees and pothole patching. We made temporary repairs to a six-foot diameter metal culvert that threatened to close Pease Twp. 630, as well as swallow up the driveway of a nearby house. This culvert was damaged in 2018's Federal disaster, and we hope to see the permanent repair in 2019. We also completed a speed study project that reduced posted speeds in sixteen locations on various County roads. To help speed up the disaster recovery work, we selected design consultants to assist the townships (and the County) with our FEMA projects. Our crews made repairs on culverts on CR 82 Airport Road and CR 86 Pugh Ridge. In late January, we received a \$4 million loan I had requested to help with our disaster projects. The loan will be repaid over the next few years using the license plate fees enacted by our Commissioners in May of 2018. Without those plate fees and this loan, the disaster repairs would have been delayed for several years.

In February we kicked off our annual bridge inspection program, inspecting 276 County and township bridges. The second week of February saw a hard freeze turn into a rapid thaw, followed by heavy rain. This was the same scenario that caused the disaster in 2018, and unfortunately the same pattern caused significant new damage this year. Along with berm washouts and culverts plugged with debris, we had almost 30 new road slips develop. This was another setback we just didn't need, as we are still struggling to get Federal funding approved to repair last year's damage. The good news was, the damage this year wasn't as severe as a year ago. And just like last year, our crews were able to quickly clear the debris and keep the roads open. We were hit again in late February, this time by high winds. But our road and bridge crews combined their efforts for another week and got the trees cleaned up.

2019 began quietly, and we had high hopes for a more normal year, at least in terms of precipitation. Our bridge crew started the New Year by replacing part of the wood deck on Goshen Twp. 191. Our road crews were kept busy by downed trees and pothole patching. We made temporary repairs to a six-foot diameter metal culvert that threatened to close Pease Twp. 630, as well as swallow up the driveway of a nearby house. This culvert was damaged in 2018's Federal disaster, and we hope to see the permanent repair in 2019. We also completed a speed study project that reduced posted speeds in sixteen locations on various County roads. To help speed up the disaster recovery work, we selected design consultants to assist the townships (and the County) with our FEMA projects. Our crews made repairs on culverts on CR 82 Airport Road and CR 86 Pugh Ridge. In late January, we received a \$4 million loan I had requested to help with our disaster projects. The loan will be repaid over the next few years using the license plate fees enacted by our Commissioners in May of 2018. Without those plate fees and this loan, the disaster repairs would have been delayed for several years.

In February we kicked off our annual bridge inspection program, inspecting 276 County and township bridges. The second week of February saw a hard freeze turn into a rapid thaw, followed by heavy rain. This was the same scenario that caused the disaster in 2018, and unfortunately the same pattern caused significant new damage this year. Along with berm washouts and culverts plugged with debris, we had almost 30 new road slips develop. This was another setback we just didn't need, as we are still struggling to get Federal funding approved to repair last year's damage. The good news was, the damage this year wasn't as severe as a year ago. And just like last year, our crews were able to quickly clear the debris and keep the roads open. We were hit again in late February, this time by high winds. But our road and bridge crews combined their efforts for another week and got the trees cleaned up.

March came in like a lion... and unfortunately went out like one! Our bridge crew made repairs to a retaining wall on CR 2 Deep Run. We completed the design on the CR 84 Oak View Culvert Replacement project, and we will be advertising it for bids in the next few weeks. On March 20, the Governor declared a new emergency for 37 of Ohio’s Counties, including Belmont. We’re hoping the President will declare it a Federal disaster, thus mobilizing FEMA. We’ve had almost \$5 million in new damages just on Belmont County roads this year, so we need all the help we can get. ODOT and the townships have had more damages this year as well. Despite the weather, our road crews have been busy adding stone to gravel roads, ditching, and making culvert repairs, like on CR 30 Dixon Hill Road. And they’ve been working on preparing the roads for this year’s chip seal project. Our bridge crew finished the month by completing a retaining wall underpinning project on CR 16 Nixon Run Road.

Wall collapse on County Road 2 Deep Run.

2019 began quietly, and we had high hopes for a more normal year, at least in terms of precipitation. Our bridge crew started the New Year by replacing part of the wood deck on Goshen Twp. 191. Our road crews were kept busy by downed trees and pothole patching. We made temporary repairs to a six-foot diameter metal culvert that threatened to close Pease Twp. 630, as well as swallow up the driveway of a nearby house. This culvert was damaged in 2018's Federal disaster, and we hope to see the permanent repair in 2019. We also completed a speed study project that reduced posted speeds in sixteen locations on various County roads. To help speed up the disaster recovery work, we selected design consultants to assist the townships (and the County) with our FEMA projects. Our crews made repairs on culverts on CR 82 Airport Road and CR 86 Pugh Ridge. In late January, we received a \$4 million loan I had requested to help with our disaster projects. The loan will be repaid over the next few years using the license plate fees enacted by our Commissioners in May of 2018. Without those plate fees and this loan, the disaster repairs would have been delayed for several years.

In February we kicked off our annual bridge inspection program, inspecting 276 County and township bridges. The second week of February saw a hard freeze turn into a rapid thaw, followed by heavy rain. This was the same scenario that caused the disaster in 2018, and unfortunately the same pattern caused significant new damage this year. Along with berm washouts and culverts plugged with debris, we had almost 30 new road slips develop. This was another setback we just didn't need, as we are still struggling to get Federal funding approved to repair last year's damage. The good news was, the damage this year wasn't as severe as a year ago. And just like last year, our crews were able to quickly clear the debris and keep the roads open. We were hit again in late February, this time by high winds. But our road and bridge crews combined their efforts for another week and got the trees cleaned up.

Terry’s Desk.....continued from Page 1

March came in like a lion... and unfortunately went out like one! Our bridge crew made repairs to a retaining wall on CR 2 Deep Run. We completed the design on the CR 84 Oak View Culvert Replacement project, and we will be advertising it for bids in the next few weeks. On March 20, the Governor declared a new emergency for 37 of Ohio’s Counties, including Belmont. We’re hoping the President will declare it a Federal disaster, thus mobilizing FEMA. We’ve had almost \$5 million in new damages just on Belmont County roads this year, so we need all the help we can get. ODOT and the townships have had more damages this year as well. Despite the weather, our road crews have been busy adding stone to gravel roads, ditching, and making culvert repairs, like on CR 30 Dixon Hill Road. And they’ve been working on preparing the roads for this year’s chip seal project. Our bridge crew finished the month by completing a retaining wall underpinning project on CR 16 Nixon Run Road.

March came in like a lion... and unfortunately went out like one! Our bridge crew made repairs to a retaining wall on CR 2 Deep Run. We completed the design on the CR 84 Oak View Culvert Replacement project, and we will be advertising it for bids in the next few weeks. On March 20, the Governor declared a new emergency for 37 of Ohio’s Counties, including Belmont. We’re hoping the President will declare it a Federal disaster, thus mobilizing FEMA. We’ve had almost \$5 million in new damages just on Belmont County roads this year, so we need all the help we can get. ODOT and the townships have had more damages this year as well. Despite the weather, our road crews have been busy adding stone to gravel roads, ditching, and making culvert repairs, like on CR 30 Dixon Hill Road. And they’ve been working on preparing the roads for this year’s chip seal project. Our bridge crew finished the month by completing a retaining wall underpinning project on CR 16 Nixon Run Road.

2019 began quietly, and we had high hopes for a more normal year, at least in terms of precipitation. Our bridge crew started the New Year by replacing part of the wood deck on Goshen Twp. 191. Our road crews were kept busy by downed trees and pothole patching. We made temporary repairs to a six-foot diameter metal culvert that threatened to close Pease Twp. 630, as well as swallow up the driveway of a nearby house. This culvert was damaged in 2018's Federal disaster, and we hope to see the permanent repair in 2019. We also completed a speed study project that reduced posted speeds in sixteen locations on various County roads. To help speed up the disaster recovery work, we selected design consultants to assist the townships (and the County) with our FEMA projects. Our crews made repairs on culverts on CR 82 Airport Road and CR 86 Pugh Ridge. In late January, we received a \$4 million loan I had requested to help with our disaster projects. The loan will be repaid over the next few years using the license plate fees enacted by our Commissioners in May of 2018. Without those plate fees and this loan, the disaster repairs would have been delayed for several years.

In February we kicked off our annual bridge inspection program, inspecting 276 County and township bridges. The second week of February saw a hard freeze turn into a rapid thaw, followed by heavy rain. This was the same scenario that caused the disaster in 2018, and unfortunately the same pattern caused significant new damage this year. Along with berm washouts and culverts plugged with debris, we had almost 30 new road slips develop. This was another setback we just didn't need, as we are still struggling to get Federal funding approved to repair last year's damage. The good news was, the damage this year wasn't as severe as a year ago. And just like last year, our crews were able to quickly clear the debris and keep the roads open. We were hit again in late February, this time by high winds. But our road and bridge crews combined their efforts for another week and got the trees cleaned up.

2019 began quietly, and we had high hopes for a more normal year, at least in terms of precipitation. Our bridge crew started the New Year by replacing part of the wood deck on Goshen Twp. 191. Our road crews were kept busy by downed trees and pothole patching. We made temporary repairs to a six-foot diameter metal culvert that threatened to close Pease Twp. 630, as well as swallow up the driveway of a nearby house. This culvert was damaged in 2018's Federal disaster, and we hope to see the permanent repair in 2019. We also completed a speed study project that reduced posted speeds in sixteen locations on various County roads. To help speed up the disaster recovery work, we selected design consultants to assist the townships (and the County) with our FEMA projects. Our crews made repairs on culverts on CR 82 Airport Road and CR 86 Pugh Ridge. In late January, we received a \$4 million loan I had requested to help with our disaster projects. The loan will be repaid over the next few years using the license plate fees enacted by our Commissioners in May of 2018. Without those plate fees and this loan, the disaster repairs would have been delayed for several years.

In February we kicked off our annual bridge inspection program, inspecting 276 County and township bridges. The second week of February saw a hard freeze turn into a rapid thaw, followed by heavy rain. This was the same scenario that caused the disaster in 2018, and unfortunately the same pattern caused significant new damage this year. Along with berm washouts and culverts plugged with debris, we had almost 30 new road slips develop. This was another setback we just didn't need, as we are still struggling to get Federal funding approved to repair last year's damage. The good news was, the damage this year wasn't as severe as a year ago. And just like last year, our crews were able to quickly clear the debris and keep the roads open. We were hit again in late February, this time by high winds. But our road and bridge crews combined their efforts for another week and got the trees cleaned up.

March came in like a lion... and unfortunately went out like one! Our bridge crew made repairs to a retaining wall on CR 2 Deep Run. We completed the design on the CR 84 Oak View Culvert Replacement project, and we will be advertising it for bids in the next few weeks. On March 20, the Governor declared a new emergency for 37 of Ohio’s Counties, including Belmont. We’re hoping the President will declare it a Federal disaster, thus mobilizing FEMA. We’ve had almost \$5 million in new damages just on Belmont County roads this year, so we need all the help we can get. ODOT and the townships have had more damages this year as well. Despite the weather, our road crews have been busy adding stone to gravel roads, ditching, and making culvert repairs, like on CR 30 Dixon Hill Road. And they’ve been working on preparing the roads for this year’s chip seal project. Our bridge crew finished the month by completing a retaining wall underpinning project on CR 16 Nixon Run Road.

Wall collapse on County Road 2 Deep Run.

Temporary 6 foot culvert repair at the intersection of County Road 16 Nixon Run and Pease Township Hart Road.
